

**THEMES FOR PRACTICAL EXERCISES IN ORAL AND MAXILLOFACIAL SURGERY –  
IV COURSE – WINTER SEMESTER**

**I. Auditory exercises – 2 hours weekly.**

1. Methods for clinical assessment, diagnosis and treatment of patients with abscesses and phlegmons in the oral and maxillofacial region according to the topographic anatomy. Inpatient study and discussions.
2. Methods for clinical assessment, diagnosis and treatment of patients with abscesses and phlegmons in the oral and maxillofacial region according to the topographic anatomy. Inpatient study and discussions.
3. Methods for clinical assessment, diagnosis and treatment of patients with abscesses and phlegmons in the oral and maxillofacial region according to the topographic anatomy. Inpatient study and discussions.
4. Methods for clinical assessment, diagnosis and treatment of patients with abscesses and phlegmons in the oral and maxillofacial region according to the topographic anatomy. Inpatient study and discussions.
5. Methods for clinical assessment, diagnosis and treatment of patients with osteomyelitis of the jaws. Inpatient study and discussions.
6. Methods for clinical assessment, diagnosis and treatment of patients with lymphadenitis in the maxillofacial area. Inpatient study and discussions.
7. Workshop on clinics, diagnosis and treatment of odontogenic infections.
8. Methods for clinical assessment, diagnosis and treatment of patients with specific inflammatory diseases in the maxillofacial area. Inpatient study and discussions.
9. Methods for clinical assessment, diagnosis and treatment of patients with maxillary sinusitis and perforation of the maxillary sinus. Inpatient study and discussions.
10. Methods for clinical assessment, diagnosis and treatment of patients with TMJ disorders. Inpatient study and discussions.
11. Methods for clinical assessment, diagnosis and treatment of patients with sialoadenitis and sialolithiasis. Inpatient study and discussions.
- 12 and 13. Methods for clinical assessment, diagnosis and treatment of patients with cysts of the jaws and the soft tissues in the maxillofacial area. Inpatient study and discussions.
- 14 and 15. Methods for clinical assessment, diagnosis and treatment of patients with cranial nerves disorders related to the oral and maxillofacial area. Inpatient study and discussions.

**II. Auditory exercises with outdoor patients (polyclinics) – 2 hours weekly.**

1. Methods of anesthesia in children and extraction of deciduous teeth.
2. Methods of anesthesia and extraction of teeth in the presence of acute odontogenic infection.
- 3 and 4. Analysis of paraclinical tests in outpatients with acute odontogenic infection. Complex ambulatory treatment of patients with acute odontogenic infection. (Drug therapy, surgical therapy, physiotherapy).
5. Methods and techniques for extraction of anterior teeth and premolars.
6. Methods and techniques for extraction of molars. Diseases of teeth eruption.
7. Methods and techniques for extraction of impacted teeth.
8. Extraction of severely damaged and fractured teeth and roots.
- 9, 10 and 11. Clinical assessment, diagnosis and treatment of complications after tooth extraction; complications during and after local anesthesia. Postoperative bleeding, post-extraction pain, perforation of the maxillary sinus.
12. Clinical assessment, diagnosis and treatment of odontogenic infections.
- 13, 14 and 15. Clinical assessment, diagnosis and treatment of teeth injuries.

HEAD OF DEPT. DENTAL, ORAL AND  
MAXILLOFACIAL SURGERY  
PROF. P. STANIMIROV, MD, DDS, PHD:.....
