

Periodontology requirements

- Diagnosis of a patient with periodontitis; patient requirements: presence of periodontitis, a minimum of 10 teeth in the mouth after extractions
- Preparation of a treatment plan for a patient with periodontitis – the treatment plan is prepared within a maximum of 10 working days after diagnostics is performed and submitted for approval to a periodontology assistant
- MANDATORY MINIMUM OF WORK PERFORMED – initial phase of the the treatment of ONE patient with periodontitis
- If possible, make a re-evaluation

Within the framework of the state internship, only one patient with periodontitis is treated for whom a treatment plan has also be signed by assistant professor.

A signature for successful internship in periodontology is obtained after performing the necessary minimum treatment procedures, proven by payment documents.

Necessary steps to prepare a treatment plan:

- Status and history
- Photo documentation (frontal view, left and right profile, upper and lower dentition, deviations in normal dental and gingival tissues, etc. mucosal lesions, etc.
- Description of dental and oral-mucosal status
- Description of plaque- retentive factors – natural and iatrogenic
- Hygiene and gingival status registered with FMPS/FMBS – in four locations
- Periodontal status, including measurements of PPD, CAL and BoP and recording the values in 6 sites, registration of mobility, furcation lesions and gingival recessions
- Radiographic status – analysis; calculation of BI/Age; measurement of bone loss at all locations where it can be measured
- Individual patient risk profile represented by a risk hexagon
- Diagnosis – with arguments for stage, grade, distribution; differential diagnosis
- Initial treatment plan, including:

- Detailed description of the procedures performed in the initial phase
- Reevaluation/expected reevaluation results – represented by a risk hexagon
- Corrective phase – surgical (with arguments in favor or lack thereof, proposal for surgical technique) and prosthetic (proposition of prosthetic treatment)
- Reevaluation after corrective therapy represented by risk hexagon – if possible to perform
- Planning intervals for periodontal maintenance

*Use the periodontal cards you've been calling since 5th course

Dear colleagues, the treatment plan of the patient with periodontitis is signed, printed on paper. For the presentation of this plan at the end of your undergraduate internship, it is necessary to be converted in PDF format or to prepare in the form of Power point presentation.

GOOD LUCK!

September, 2026
